

Amendments to the Claims:

This listing of claims replaces all prior versions and listings of claims in the application:

Listing of Claims:

1-6. (Canceled)

7. (Previously presented) A light emitting device comprising:

a source line driving circuit; and

a pixel portion comprising a source line and a power source line,

wherein a last stage of the source line driving circuit is electrically connected to the source line, and

wherein a power source is electrically connected to both the last stage and the power source line.

8. (Original) A light emitting device comprising:

a source line driving circuit;

a first pixel comprising a first source line and a first power source line; and

a second pixel comprising a second source line and a second power source line,

wherein a last stage of the source line driving circuit is electrically connected to the first source line and the second source line,

wherein a first power source is electrically connected to both the last stage and the first power source line, and

wherein a second power source is electrically connected to both the last stage and the second power source line.

9. (Original) A light emitting device according to claim 8, wherein an electric potential of the first power source is different from that of the second power source.

10. (Previously presented) A light emitting device comprising:

a source line driving circuit; and  
a pixel portion comprising a source line and a power source line,  
wherein the source line is electrically connected to the source line driving circuit, and  
wherein a power source for fixing an electric potential output to the source line is  
electrically connected to both the source line driving circuit and the power source line.

11. (Previously presented) A light emitting device comprising:  
a source line driving circuit;  
a first pixel comprising a first source line and a first power source line; and  
a second pixel comprising a second source line and a second power source line,  
wherein the first source line and the second source line are electrically connected to the  
source line driving circuit,  
wherein a first power source for fixing an electric potential output to the first source line  
is electrically connected to both the source line driving circuit and the first power source line,  
and  
wherein a second power source for fixing an electric potential output to the second source  
line is electrically connected to both the source line driving circuit and the second power source  
line.

12. (Original) A light emitting device according to claim 11, wherein an electric potential  
of the first power source is different from that of the second power source.

13-18. (Canceled)

19. (Original) A light emitting device according to claim 7, wherein the last stage  
includes at least a level shifter.

20. (Original) A light emitting device according to claim 8, wherein the last stage

includes at least a level shifter.

21. (Original) An electronic apparatus having the light emitting device according to claim 7.

22. (Original) An electronic apparatus according to claim 21, wherein the electronic apparatus is selected from the group consisting of a video camera, a digital camera, a goggles-type display, a navigation system, a sound reproduction device, a lap-top computer, a game machine, a portable information terminal, an image reproduction device including a recording medium.

23. (Original) An electronic apparatus having the light emitting device according to claim 8.

24. (Original) An electronic apparatus according to claim 23, wherein the electronic apparatus is selected from the group consisting of a video camera, a digital camera, a goggles-type display, a navigation system, a sound reproduction device, a lap-top computer, a game machine, a portable information terminal, an image reproduction device including a recording medium.

25. (Original) An electronic apparatus having the light emitting device according to claim 10.

26. (Original) An electronic apparatus according to claim 25, wherein the electronic apparatus is selected from the group consisting of a video camera, a digital camera, a goggles-type display, a navigation system, a sound reproduction device, a lap-top computer, a game machine, a portable information terminal, an image reproduction device including a recording medium.

27. (Original) An electronic apparatus having the light emitting device according to claim 11.

28. (Original) An electronic apparatus according to claim 27, wherein the electronic apparatus is selected from the group consisting of a video camera, a digital camera, a goggles-type display, a navigation system, a sound reproduction device, a lap-top computer, a game machine, a portable information terminal, an image reproduction device including a recording medium.

29. (New) An active matrix light emitting device comprising:  
a pixel portion in which a light emitting element is provided in a pixel, the pixel portion comprising:

- a source line;
- a power source line;
- a gate line; and
- a first TFT connected to the source line and the gate line;
- a gate line driving circuit; and
- a source line driving circuit comprising a second TFT,

wherein the second TFT is connected to the source line, and  
wherein a power source is connected to both the second TFT and the power source line.

30. (New) An active matrix light emitting device comprising:  
a pixel portion in which a light emitting element is provided in a pixel, the pixel portion comprising:

- a source line;
- a power source line;
- a gate line; and
- a first TFT connected to the source line and the gate line;
- a gate line driving circuit; and
- a source line driving circuit comprising a second TFT,

wherein a last stage of the source line driving circuit is electrically connected to

the source line, and

wherein a power source is electrically connected to both the last stage and the power source line.

31. (New) An active matrix light emitting device according to claim 30, wherein the last stage includes at least a level shifter.

32. (New) An electronic apparatus having the active matrix light emitting device according to claim 29.

33. (New) An electronic apparatus according to claim 32, wherein the electronic apparatus is selected from the group consisting of a video camera, a digital camera, a goggles-type display, a navigation system, a sound reproduction device, a lap-top computer, a game machine, a portable information terminal, an image reproduction device including a recording medium.

34. (New) An electronic apparatus having the active matrix light emitting device according to claim 30.

35. (New) An electronic apparatus according to claim 34, wherein the electronic apparatus is selected from the group consisting of a video camera, a digital camera, a goggles-type display, a navigation system, a sound reproduction device, a lap-top computer, a game machine, a portable information terminal, an image reproduction device including a recording medium.
